Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
    int s =1;
    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

    scanf("%d", &n);
    int counter = 0;
    int i = 1;
    counter++;
    int s = 1;
    counter++;

    while (1) {
        counter++;
        if (!(s <= n))
            break;

        i++;
        counter++;
